

PARTICIPATION OF ENTEL IN THE GCC CIGRE INTERNATIONAL CONFERENCE

The GCC Regional Committee for Large Electric Systems organized the 12th GCC- Cigre International Conference & 21st Exhibition for Electrical Equipment in Doha, State of Qatar, from 8-9 November 2016. The two-day event was hosted by the Qatar General Electricity and Water Corporation (Kahramaa) as the main, and Energoprojekt Entel, due to its sound and enduring partnership with the host, as the official Bronze Sponsor.

Both the Conference and Exhibition proved themselves to be an excellent opportunity for company promotion and for improving business relationships with major Middle East investors and leading companies in the energy sector, including *Siemens, ABB, General Electric, Schneider Electric* and many others. During the panel discussions the participants had a chance to exchange the views on the latest tenders, development strategies, future plans and preferred means of meeting the growing energy needs.

Within the conference program, our young colleague, Mr. Milos Jovanović from Entel's UAE office, presented its "*Experimental Study of High Impedance Earth Faults and Protection and Directly Earthed Overhead Medium Voltage Network with Desert Land plots*", for which he was awarded by the host.

The conference was attended by many distinguished guests - the Minister of Energy and Industry of Qatar accompanied by the eminent regional energy sector experts, but also representatives of other investors and reputable Middle East companies, including the Saudi Arabia and Kuwait Electricity Company representatives.

Great attendance of visitors to the stand contributed to the belief that customer trust and confidence, which Entel has gained over its 25 years of continuous presence in the Middle East, allowed the company to consolidate its position as one of the leading consulting engineering service providers in the region.
